

Capability Statement

Founded in 1990, Network Controls and Electric Inc, began as a Service Oriented Electrical Contractor. Today with the evolution and ever changing technology Network Controls focuses more on “Turn-Key” Telecommunication and Low Voltage solutions. We offer services ranging from 24 Hour Service and Preventive Maintenance Programs to Design Builds and Large Scale Projects. Our commitment to on-time project completion and job quality has afforded us industry growth and a well respected reputation. Our Office Staff, Project Management teams, and Field Supervisory personnel ensure milestones are met through communication and pre-project planning. Our jobs are completed with the highest degree of quality, precision, and customer satisfaction possible.

In the past 5 years our Structured Cabling Division has grown from servicing only Commercial/Industrial accounts to servicing both State & Federal Agencies. Network Controls now has an entire division dedicated to State & Federal Contracting to ensure quality research, timely responses, and accurate RFP’s are produced. Because of this, in 2010 alone, Network Controls was awarded (3) Federal Prime Contracts. Two of these contracts were for the Department of Defense installations here in South Carolina. Network Controls has a valid DUNS# (**87-648-9998**), Cage Code (**4LMB6**), Tax ID (**57-1135612**) and is registered with CCR, SBA, ORCA, WAWF, and is a “Certified Veteran Owned Small Business”.

Our core business is installing Structured Cabling consisting of Cat 5e, Cat 6, Coaxial Copper, along with Single & Multimode Fiber Optic cabling. We have resources on staff and available to provide “Both” Inside & Outside Plant Complete services. We have more than 30 Voice & Data Technicians on our full time staff, (2) “On Staff” RCDD’s, and (3) separate office spaces to include Columbia, SC. Our personnel are certified by many different manufacturers to include AMP, Corning, Panduit, STI, Leviton, Molex, and many more. Along with these certifications our technicians are BICSI Certified and are familiar with BICSI’s common practices and procedures. Our partnerships with these manufacturers allow us to offer Extended Warranties ranging from 10 to 25 years pending on product.

Listed Below are a few projects that Network Controls has been awarded either directly or in-directly over the past 5 years. We are also licensed to operate in SC, NC, GA, AL, & TN.
